

TP – 300 – STRONG SECURITY SEAL FOR SACKS

- ❖ **TP – 300** is a very effective plastic seal for sacks. Its material is polyethylene with added special colouring material.
- ❖ The seals are etched with permanent laser marking. The laser marking offers high security because it can't be removed and replaced.
- ❖ The locking mechanism of the seal head includes special security features which prevent the seal being closed from the wrong direction.
- ❖ The total length of the seal is 300mm, its operational length is 200 mm and the width of the strap is 8 mm.
- ❖ The upper section of the strap is slightly widened which contains the pins that hold the sack and provides space for security marking and numbering of max. 30 mm x8 mm. It also offers a breakline with the help of which opening of the seal is a lot easier.
- ❖ Since TP-300 does not offer much room for marking and numbering, a special data carrier plate was developed to carry additional information belonging to the items closed with a TP-300 security seal, however it is also recommended with other seals. (picture in top left hand corner)

Specifications

- **TP-300** is a highly effective security seal mainly recommended for the sealing of different sacks.
- It has an extremely competitive price
- Tampering or not appropriate closing of TP-300 is impossible thanks to its special locking mechanism.
- TP-300 is marked with laser technology which is currently the safest marking procedure.

Facts

- **TP-300:**
Material: polyethylene. With the laser additive in the material the seal can be laser etched. Every TP-300 seal is made upon customers' order which excludes duplication i.e. the possibility of producing many same seals.

Details

| Material | Strap | | | Head | Marking surface | HT data carrier plate | Packing |
